

Regulina-T™ Dossier

Brief Overview:

Regulina-T™ is a groundbreaking genetically engineered protein designed for thymus regeneration and restoration of immune system balance. The platform is developed in compliance with international scientific and technological standards.

Key Facts:

- **Molecular Type:** Recombinant glycoprotein (RGN-T1™)
- **Purpose:** Immunoregulation, restoration of thymus function
- **Purity:** 95–99% (laboratory standard)
- **Medical Segments:** Oncology, autoimmune diseases, transplantation, age-related immunodeficiencies
- **Global Market:** Over 2.5 billion patients
- **Technology Owner:** Teimuraz Karchava
